Autodesk Factory Design Suites extend Digital Prototyping to the factory floor.

Shipped June 22, 2010

Autodesk® Factory Design Suites are a 2D/3D factory layout solution purpose-built to help you make better design decisions and accelerate the factory layout process by creating a digital prototype of your factory. Autodesk Factory Design Suite can help you better design, optimize, and visualize the layout before the equipment is installed and commissioned on the factory floor. The suites enable you to integrate 2D layout data with custom or out-of-the-box 3D models of factory equipment and create a digital factory model. Use the factory model to quickly try multiple “what if” scenarios and help transform facility liabilities into profit-generating assets.
