

Autodesk Provides 3D Design in a Browser, an Industry First

Nov 05, 2013

Collaboration with Amazon Web Services, OTOY and NVIDIA Enables Developers to Access Powerful 3D Modeling from Anywhere, Anytime, with Any Device Using a Simple Web Browser

SAN FRANCISCO--(BUSINESS WIRE)--Nov. 5, 2013-- [Autodesk, Inc.](#) (NASDAQ: ADSK) customers will now be able to access [Autodesk Inventor](#), [Autodesk Revit](#), [Autodesk Maya](#) and [Autodesk 3ds Max](#) design tools via a web browser. For the first time ever, customers can access full-fledged 3D design, engineering and entertainment work in a browser without sacrificing performance, power or functionality.

Today's announcement furthers the company's ongoing strategy to provide access to its most popular tools from almost anywhere, anytime, regardless of device and without compromising performance. Continuing to build on Autodesk's collaboration with [Amazon Web Services \(AWS\)](#), [OTOY](#) and [NVIDIA](#) this new capability debuts as a tech preview and is an important expansion of the remote access capabilities provided through [Autodesk Remote](#) software. With this new capability, developers can access 90-day trials of Autodesk Inventor, Autodesk Revit, Autodesk Maya and Autodesk 3ds Max software.

"Designers and engineers face deadline pressures and efficiency targets that demand work be more mobile than ever," said [Jeff Kowalski](#), chief technology officer at Autodesk. "It's no longer a requirement to run sophisticated 3D design applications such as Inventor, Revit, 3ds Max or Maya on a powerful workstation. Now all you need is a simple browser and an Internet connection. We are excited to be first in the design industry to provide this capability."

In August, Autodesk Remote was made available to [Subscription](#) and rental plan customers worldwide. Remote allows users to drive Autodesk software installed on their primary computer from a remote PC or iPad, utilizing its full power in their 3D design and modeling work regardless of the device. The collaboration with AWS and OTOY expands on this capability to include access to Autodesk applications hosted in the cloud.

Supporting Partner Quotes

"OTOY and Autodesk worked together to provide customers with a turn-key solution for accessing 3D design applications through their HTML5 browser," said Jules Urbach, CEO of OTOY. "For the first time ever, design and engineering professionals can access all the features of Autodesk 3DS Max, Autodesk Maya, Autodesk Revit and Autodesk Inventor software to perform major design work, without ever having to download a piece of software to their local PC. OTOY's OctaneRender further enhances this experience by adding real-time, path-traced GPU rendering inside Autodesk applications. All of these pieces will be cohesively hosted on the cloud, leveraging the unprecedented scale and efficiency of AWS' on-demand Amazon EC2 GPU instances. We believe this solution will not only translate to major cost savings for consumers, but greatly impact the mobility and efficiency of their workflow."

"With the launch of G2 instances for Amazon Elastic Compute Cloud (Amazon EC2) today, we are enabling the delivery of high-quality, client-agnostic 3D experiences to customers around the world," said Matt Wood, General Manager, Data Science, AWS. "We are working closely with leading organizations such as Autodesk to leverage these powerful capabilities to meet the needs of designers and engineers around the world."

"Design professionals need fast, fluid interactivity with their digital creations to fully realize their vision and express their ideas," said Jeff Brown, general manager of Professional Visualization and Design at NVIDIA. "With the availability of NVIDIA GRID GPUs and Autodesk applications in the cloud from AWS, high-performance graphics are now available to power the most demanding and advanced applications on essentially any device."
