

Autodesk Launches Tinkerplay App to Make 3D Design and 3D Printing Fun

Mar 17, 2015

SAN FRANCISCO--(BUSINESS WIRE)--Mar. 17, 2015-- [Autodesk, Inc.](#) (NASDAQ: ADSK) announced the launch of Tinkerplay, a free* app designed for kids of all ages that introduces creative play through 3D design and 3D printing.

The Tinkerplay app is based on the popular Modio app, which Autodesk previously acquired, and will join the [Tinkercad](#) family of products. The Tinkerplay app allows users to design and customize characters and creatures digitally with the option to 3D print afterwards. The 3D printed parts can also be snapped together for dynamic play. With this launch, new parts, features and functionality have been added to make the world of 3D design simple, fun and engaging.

"Creators, designers and makers from ages five to ninety, have blown us away with their passion for 3D modeling and 3D printing," said Samir Hanna, vice president and general manager, Autodesk Consumer and 3D Printing. "With Tinkerplay, we're providing another great tool designed for kids of all ages who want to play, create and tinker."

The Tinkerplay app lets users quickly get started by dragging and dropping interchangeable parts to make custom creations. The parts are optimized for 3D printing as fully poseable characters and creatures, and are designed to not require rafting or support material to print. The print function within the app shows the layout of parts for 3D printing and provides an easy way to export print files to a variety of 3D printers.

For users that are inspired to take their design skills one step further to create completely new parts, Tinkerplay connectors can be found in the Tinkercad web app. Autodesk has launched Tinkerplay simultaneously on various mobile platforms including [iOS](#), [Android](#), [Windows](#) and [Windows phones](#) to better provide users with access on their device of choice. The Tinkerplay app can be downloaded for free* from the App Store, Google Play or the Windows Store for Windows 8.1 users.

About Autodesk

Autodesk helps people imagine, design and create a better world. Everyone—from design professionals, engineers and architects to digital artists, students and hobbyists—uses Autodesk software to unlock their creativity and solve important challenges.
