

Autodesk Accelerates the Future of Digital and Physical 3D Creation with Microsoft

April 30, 2015

Autodesk announces Spark 3D printing platform to be embedded in Windows 10 and intent to make digital 3D models interoperable with Microsoft HoloLens

SAN FRANCISCO--(BUSINESS WIRE)--Apr. 30, 2015-- **Build Conference** —In two separate but related efforts to advance the future of digital and physical creation, [Autodesk, Inc.](#) (NASDAQ:ADSK) announced it is working with [Microsoft Corp.](#) to embed its 3D printing platform in Windows 10, and that it intends to make its 3D modeling software interoperable with Microsoft's mixed reality environment, [Microsoft HoloLens](#).

In the first initiative, Autodesk will embed its [Spark](#) 3D printing software platform in Windows 10. This effort will provide Windows users with direct access to optimized and more reliable 3D printing experiences that streamline the additive manufacturing process for a variety of software, material, and printer choices. Autodesk will make the Spark APIs available for free* to the Microsoft developer community to build upon, extending the reach and growth of the 3D printing industry. Further, to their combined goal of making 3D printing more accessible, Autodesk will also join Microsoft as a founding member of a 3D Manufacturing Format (3MF) Consortium to create and support a standard 3D interchange and printing format.

"We're approaching a tipping point with 3D printing, which means there is a huge market opportunity waiting for companies developing applications for Windows 10," said Steve Guggenheimer, Corporate Vice President of Developer Platform & Evangelism and Chief Evangelist for Microsoft. "By providing the 3D printing building blocks found in the Spark platform and optimizing it for Windows 10, Autodesk has empowered our global developer community to confidently enter this new world of additive manufacturing."

The second initiative is aimed at bringing 3D models from Autodesk software into the virtual reality environment of [Microsoft HoloLens](#). Digital models using software such as [Autodesk Maya](#) or [Fusion 360](#) could then be viewable in the mixed reality environment enabled by HoloLens. For game developers and filmmakers, this may accelerate the creation of a new generation of entertainment experiences. For designers and engineers, this may make it possible to digitally view a full scale model during the up front design phase of product development, cutting down on the time and cost required for physical prototypes before fabrication.

In the future, designers and engineers could create 3D models of their ideas with Autodesk software, like [Fusion 360](#), view the models with HoloLens, and prep them for 3D printing on Spark-compatible printers.

"3D printing is incredibly promising, but also still too complex and unreliable. This relationship is a key step in making 3D printing easier and more accessible to businesses and individuals alike," said Samir Hanna, vice president and general manager, Consumer and 3D Printing, Autodesk. "Together with Microsoft and its global community of developers, we have an opportunity to tackle the complexities of 3D design and printing head-on to improve how things are made and even change the very nature of what we create."

About Autodesk

Autodesk helps people imagine, design and create a better world. Everyone—from design professionals, engineers and architects to digital artists, students and hobbyists—uses Autodesk software to unlock their creativity and solve important challenges.
